

ARTIFICIAL INTELLIGENCE ROADMAP FOR BEGINNERS (2026)

PHASE 1 — START WITH BASICS

1. Learn Python

Focus on:

- Variables
- Loops
- Functions
- Lists & Dictionaries
- OOP basics

Resources:

- Python basics videos
- Practice small programs daily

2. Learn Basic Mathematics

You don't need advanced maths initially.

Focus on:

- Percentages
- Probability basics
- Graphs
- Linear equations

3. Understand AI Basics

Learn:

- What is AI?
- Machine Learning vs Deep Learning
- How ChatGPT works (basic understanding)

- Real-world AI applications

PHASE 2 — LEARN MACHINE LEARNING

Topics to Learn

- Supervised Learning
- Unsupervised Learning
- Regression
- Classification
- Clustering

Libraries

Learn basics of:

- NumPy
- Pandas
- Matplotlib
- Scikit-learn

Practice Projects

- Student marks prediction
- House price prediction
- Spam detection

PHASE 3 — START BUILDING PROJECTS

Beginner Projects

- AI chatbot
- Face detection
- Recommendation system
- Fake news detection

Learn:

- APIs
- Data preprocessing
- Model training
- Accuracy testing

PHASE 4 — LEARN GENERATIVE AI

Focus On:

- Prompt engineering
- LLM basics
- AI agents
- ChatGPT API
- Hugging Face

Build:

- AI assistant
- Resume analyzer
- AI content generator

PHASE 5 — DEPLOYMENT & PORTFOLIO

Learn:

- GitHub
- Streamlit
- Flask / FastAPI basics

Create:

- Portfolio website
- GitHub projects
- LinkedIn profile

IMPORTANT SKILLS FOR AI

- Problem solving
- Communication
- Consistency
- Curiosity
- Project building

TOOLS TO LEARN

- ChatGPT
- Google Colab
- VS Code
- GitHub
- Kaggle

COMMON MISTAKES

- Watching tutorials only
- No projects
- Learning everything together
- Skipping Python basics
- No consistency

SIMPLE DAILY PLAN

1 hour Python
1 hour AI/ML learning
1 hour project/practice

FINAL ADVICE

Don't wait to become perfect.

Start small.

Build projects.

Stay consistent.

AI is growing fast, and early learners will always have an advantage.
