

Make Any Resume ATS-Friendly in 60 Seconds

A simple AI workflow to rewrite your resume for the exact job you're applying to — matched to the keywords recruiters and applicant tracking systems scan for, delivered as a clean, one-page PDF. No invented skills. Works for any VLSI / engineering role.

// THE 5-STEP WORKFLOW

1

Open Claude

Go to claude.ai (or the Claude app) and start a new chat.

2

Paste the prompt

Copy the full prompt on the next page and paste it into the chat box.

3

Upload your resume

Attach your current resume as a [PDF](#) using the attachment / paperclip icon.

4

Paste the job description

Drop in the full job posting where the prompt says [Job Description](#), and name the [target role](#).

5

Hit enter

You get a tailored, [single-page](#), [ATS-safe PDF](#) with selectable text — ready to download and send.

// BEFORE VS AFTER — WHAT CHANGES

What the AI does

- + Pulls exact keywords from the job description (only the ones true for you)
- + Rewrites bullets as: action + tool/method + result
- + Puts your most relevant experience first
- + Single-column, no tables or graphics — clean for any ATS

What it never does

- × Invent skills, tools, or experience you don't have
- × Add fake metrics or companies
- × Use icons, columns, or images that break ATS parsing
- × Go over one page

Tip: Tailor first, then score. Run the new resume through the ATS scorer to check your keyword match before you apply — and re-tailor for every new job. Don't spray one resume everywhere.

The Copy-Paste Prompt

Paste this exactly as-is. Replace only the bracketed parts: the job description, your resume (attach it), and your target role.

// COPY EVERYTHING IN THE BOX BELOW

PROMPT.TXT

You are an expert resume writer and ATS (Applicant Tracking System) optimization specialist. Rewrite my resume so it passes ATS keyword scanning and reads well to a recruiter, then give me the final resume as a downloadable PDF.

=== WHAT I'M GIVING YOU ===

1. TARGET JOB DESCRIPTION: <paste the job posting here>
2. MY CURRENT RESUME: <attach the file>
3. TARGET ROLE: <e.g., Physical Design Engineer>

Pull everything else (experience, skills, education, location) from my resume itself. Never invent skills or experience I don't have.

=== WHAT TO DO ===

- Use the exact keywords and terminology from the JOB DESCRIPTION wherever they're true for me.
- Rewrite each bullet as: action verb + what I did + tool/method + result (with numbers where possible). One to two lines each.
- Put the most relevant experience first. Add a 2-3 line summary at the top.
- Keep it to ONE page.

=== FORMATTING (ATS-safe) ===

- Single column. No tables, images, icons, or graphics.
- Plain headings: Summary, Skills, Experience, Education, Projects.
- Name and contact details as plain text at the top.
- Simple bullets, standard font (Calibri/Arial), 10-12 pt.

=== OUTPUT ===

Give me the final, single-page, ATS-safe resume as a downloadable PDF with selectable text.

How to fill the brackets: Paste the full job posting after **TARGET JOB DESCRIPTION**. Attach your resume PDF (the line just reminds the AI it's coming). Write your exact role after **TARGET ROLE** — e.g. DFT Engineer, RTL Design Engineer, Verification Engineer.
